

General Description

The x485 are low-power transceivers for RS-485 and RS-422 communication. Each part contains one driver and one Receiver. The driver slew rates of the x485 are not limited, allowing them to transmit up to 2.5Mbps. These transceivers draw between 120µA and 500µA of supply current when unloaded or fully loaded with disabled

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. NOTES FOR ELECTRICAL/SWITCHING CHARACTERISTICS

- Note 1:** All currents into device pins are positive; all currents out of device pins are negative. All voltages are referenced to device ground unless otherwise specified.
- Note 2:** All typical specifications are given for $V_{CC} = 5V$ and $T_A = +25^\circ C$.
- Note 3:** Supply current specification is valid for loaded transmitters when $DE = 0V$.
- Note 4:** Applies to peak current. See *Typical Operating Characteristics*.

Pin Description

PIN		NAME	FUNCTION
485			
DIP/SOP MSOP	µMAX		
1	3	RO	Receiver Output: If $A > B$ by 200mV, RO will be high; If $A < B$ by 200mV, RO will be low.
2	4	\overline{RE}	Receiver Output Enable. RO is enabled when \overline{RE} is low; RO is high impedance when \overline{RE} is high.
3	5	DE	Driver Output Enable. The driver outputs, Y and Z, are enabled by bringing DE high. They are high impedance when DE is low. If the driver outputs are enabled, the parts function as line drivers. While they are high impedance, they function as line receivers if \overline{RE} is low.
4	6	DI	Driver Input. A low on DI forces output Y low and output Z high. Similarly, a high on DI forces output Y high and output Z low.
5	7	GND	Ground
—	—	Y	Noninverting Driver Output
—	—	Z	Inverting Driver Output
6	8	A	Noninverting Receiver Input and Noninverting Driver Output
—	—	A	Noninverting Receiver Input
7	1	B	Inverting Receiver Input and Inverting Driver Output
—	—	B	Inverting Receiver Input
8	2	VCC	Positive Supply: $4.75V \leq V_{CC} \leq 5.25V$
—	—	N.C.	No Connect—not internally connected
